

PROCEEDINGS OF THE SOCIETY.

---

2ND ORDINARY GENERAL MEETING, 1919.

This was held on the 8th August, 1919, and was attended by 16 members and 6 guests.

The President informed the members that he had received an enquiry from Messrs. Robinson and Kloss of the F. M. S. Museums, who were compiling a series of papers on the Vertebrates of Siam, whether the Society would care to publish the papers as part of the Journal, the F. M. S. Museums contributing to the costs of publication, and that the Editors of the Journal were considering the matter.

Mr. E. G. Herbert then read a paper on the breeding of larks and pipits near Bangkok, specimens of the birds and their eggs being exhibited by him. He also exhibited a new variety of pheasant obtained by Mr. K. G. Gairdner.

Dr. Smith exhibited a new genus of sea snake from Singora as well as other sea snakes and a collection of flying lizards. Mr. W. J. F. Williamson exhibited the eggs of certain terns with specimens of the birds.
